

# Video for your Website

**\$1,000 for 15 MINUTES!!!**

It seems everyone is getting a new SmartPhone, TouchPad or some other SmartDevice. So, you want to stream some video from your website ... but — GASP! — production costs \$1,000+ per minute of finished video?? Ouch!!

*We can deliver polished video for much less than that.*

Streaming video is clearly a communication medium that is coming of age for marketing, training, investor relations, product demonstration, etc. When communicating to internal or external audiences, on-demand streaming content is an effective, efficient and reusable way to get your message across.

Cost need not be prohibitive. Video math is simple: the more complicated the production + the more people involved = higher cost. For many purposes, you don't need a heavily-produced video. You need to get the message right and deliver it well. The image needs to be crisp and the audio clear.

*We can deliver finished HD video, optimized and ready for web streaming starting at \$1,000 for 15 minutes.*

Xybornaut Multimedia specializes in developing content for streaming over the web to mobile and desktop devices.
